

US Superstore Sales Performance Dashboard

Excel | Power Query | Pivot Tables | 2015-2018

Princess Ohiri-Okere

Project at a Glance:

Dataset

US Superstore Sales

Records

9,800 Transactions

Period

2015 – 2018

Tool

Microsoft Excel

Full analysis and working file available at: <https://github.com/Princess-Okere/Superstore-Sales-Dashboard.git>

US Superstore Sales Performance Dashboard | 2015-2018

Source: US Superstore Sales Database | Built in Microsoft Excel

Total Orders
9800

Total Revenue
\$2.3M

AOV
\$230.8

Customers
793

CLEAR ALL FILTERS

Filter by Year

2015

2016

2017

2018

Filter by Region

Central

East

South

West

West Leads With 31.4% of Total Revenue

Revenue Grew 50.5% Over Four Years With Consistent Q4 Peaks

Based on a full period 2015-2018

Consumer Leads All Three Segments in Total Revenue

Home Office Leads AOV

High Order Volume Does Not Guarantee High Revenue

Phones outperforms Binders 14.5% to 8.8% with fewer orders

Top 5 States Generates 51.9% of Revenue — Bottom 5 Generate Just 0.3%

Based on a full period 2015-2018

Sales Peak in Nov and Drop in Jan — Every Year

Average monthly revenue across 2015 - 2018

Regional Performance

West Leads With **31.4%** of Total Revenue

Key Findings

- ▶ West leads with 31.4% of total revenue
- ▶ South trails at 17.2% — a 14.2 point gap behind West
- ▶ East and West together account for 61% of all revenue
- ▶ Revenue is geographically concentrated — two regions dominate

Revenue Trends (2015-2018)

Key Findings

- ▶ Overall, revenue followed a consistent upward trajectory across all four years.
- ▶ Q4 peaks every year — the highest quarter in each year is always Q4 without exception.
- ▶ A recurring Q1 dip visible across all four years.
- ▶ 2016 shows the flattest period — peaks and troughs remained at similar levels to 2015.
- ▶ Growth visibly accelerated from 2017 — both peaks and troughs rose sharply through 2017 and 2018.
- ▶ Highest single quarter: 2018 Q4 at \$278.4K.

Category Performance

Key Findings

- ▶ Technology leads revenue despite fewest transactions
- ▶ Phones: 14.5% of total revenue (\$327.8K)
- ▶ Binders: 1,492 orders — most transactions, only 8.8% of revenue
- ▶ High volume ≠ high revenue

Geographic Performance

Key Findings

- ▶ Top 5 states = 51.9% of total revenue.
- ▶ Bottom 5 states = just 0.3%.
- ▶ California alone (\$446K) exceeds all bottom 5 states combined (\$6K).
- ▶ North Dakota: \$920 total across four years.

Seasonal Patterns

Sales Peak in **Nov** and Drop in **Jan** — Every Year

Average monthly revenue across 2015 - 2018

Key Findings

- ▶ November is the strongest month every year (\$21.9K avg).
- ▶ September produces a consistent mid-year peak.
- ▶ January is the weakest month every year (\$5.9K avg).
- ▶ This pattern repeats across all four years — structural, not random.

Customer Segments

Key Findings

- ▶ **Consumer generates the highest revenue but has the lowest AOV — indicating strong performance driven by order volume.**
- ▶ **Home Office has highest AOV**
at \$243 — reflecting fewer yet higher-value purchases.

Business Recommendations

Based on the analysis findings:

- 1. Strengthen West region investment — defend the dominant 31.4% revenue position.**
- 2. Develop South region strategy — 17.2% share signals underdevelopment relative to other regions.**
- 3. Build Q1 recovery campaigns — January consistently underperforms; preventable with targeted promotion.**
- 4. Prioritize Technology category growth — highest revenue per transaction across all sub-categories.**
- 5. Target Home Office segment expansion — highest AOV, lowest customer count, largest untapped growth opportunity.**
- 6. Focus geographic acquisition in top-performing states — California, New York and Texas show proven buying behavior.**

Skills Demonstrated

Technical

- Microsoft Excel
- Power Query (data cleaning)
- Pivot Tables & GETPIVOTDATA
- Dynamic KPI cards
- Slicer-driven filtering
- Combo, line & bar charts
- VBA macro

Analytical

- Business question formulation
- Volume vs value analysis
- Seasonal pattern identification
- Geographic performance analysis
- Customer segmentation
- Insight communication
- Dashboard design principles
